FOR IMMEDIATE RELEASE

May 25, 2010

Carbonflow Corp. announces strategic alliances with Carbon Trade Exchange Ltd.

Cologne, May 26, 2010: Carbonflow Corp., a provider of unique project and data management software (Connect+) has announced today that it has executed a Memorandum of Understanding with Carbon Trade Exchange (CTX). CTX is the world's first global spot electronic exchange for Voluntary Carbon Credits.

The planned alliance between CTX and Carbonflow is intended to enable carbon sellers to enter CTX's carbon exchange platform directly from Carbonflow's Connect+ and allow them to follow the status of the traded credits. Straight through processing of project information from developer, through auditor into the registry and up to the traded credit with unbroken digital audit trail, will instill full trust in the voluntary credits market.

The joint solutions would provide project developers/users with a cradle-to-grave approach for managing the entire lifecycle of an offset project from the first project idea, through project design, registration, validation and verification to issuance and delivery of credits, to the sale and capital return from credits. The project workflow and financial workflow for a project is intended to be integrated for the user throughout the life of the project and its environmental attributes, while CTX provides online trade for verified issued credits.

Robert Dornau, Board Member at Carbonflow and Executive Vice President of Business Development: "We are excited to work with CTX to create a unique link between Connect+ and the CTX trading platform. This link will ensure buyers of credits in the voluntary market of an unbroken audit trail of documents from the project site to the credit in their account. Users of Connect+ will have a most convenient way to trade."

Wayne Sharpe, CEO & Founder of Carbon Trade Exchange comments: "Fast and efficient return on investment for projects is fundamental to Carbon Trade Exchange. Our solution provides maximum return with minimum effort by our seamless global solution; monetizing carbon assets. The Carbonflow solution and alliance with CTX means project developers spend less time on non-income producing activity and get the best return for their efforts in combating greenhouse gas emissions."

Carbonflow's software solutions are currently applied by over 700 users in 300 companies. Carbonflow clients include the World Bank, Tricorona, Standard Bank, TFS Green and the major GHG auditors.

NOTES TO EDITORS

About Carbonflow

Carbonflow develops and markets software for carbon reduction market participants. Carbonflow was founded in 2006. Our offices are located in San Francisco, Sydney and Zurich. We provide unique browser-based products and services that empower any organisation to manage and monitor carbon projects on a secure multi-party platform. Our solution provides accessible technology to everyone, including those in developing countries with limited internet access. Carbonflow delivers a suite of products and services to address exactly what the market is asking for – faster and more efficient processes, with more transparency and better quality data.

About CTX

Carbon Trade Exchange (CTX) is the world's first global spot electronic trading platform for voluntary carbon credits. The aim of CTX is to provide a trusted marketplace where businesses can buy emissions commodities with confidence in the quality and origin of the products being sold. CTX's award-winning, robust Carbon Exchange Platform and its relationships with premiere market Registries are the key to achieving the parties' aims. This framework provides transparency by tracking an offset from its generation and verification through to its transfer and eventual retirement.
